

Software Requirements Specification (SRS)

Security Incident Mapping (SIM)

1. Introduction

The purpose of SIM is to provide a web-based platform for students, staff and landlords to report campus security incidents while allowing administrators to monitor and manage reports.

2. Scope

Users can log in, report incidents and administrators can view reports.

3. Functional Requirements

User login; Report incident; Store reports using localStorage; Administrator views reports; Restrict report viewing to administrators.

4. Non-Functional Requirements

Usability, Security, Reliability, Performance and Availability.

5. User Classes

Student, Staff, Landlord and Administrator.

6. Interfaces

HTML, CSS and JavaScript through a web browser.

7. Assumptions and Constraints

Academic prototype using browser localStorage without a backend database.

8. Conclusion

SIM improves campus security reporting through a simple web interface.
